## Tut 11: More Hierarchical Clustering

Jan 2022

## **Hierarchical Clustering**

1. (May 2020 Final Q3(b)) Given an appropriate example to explain why the Minkowski distance

$$M(\boldsymbol{x}, \boldsymbol{y}) = \left(\sum_{i=1}^p |x_i - y_i|^r\right)^{rac{1}{r}}, \quad \boldsymbol{x}, \ \boldsymbol{y} \in \mathbb{R}^p$$

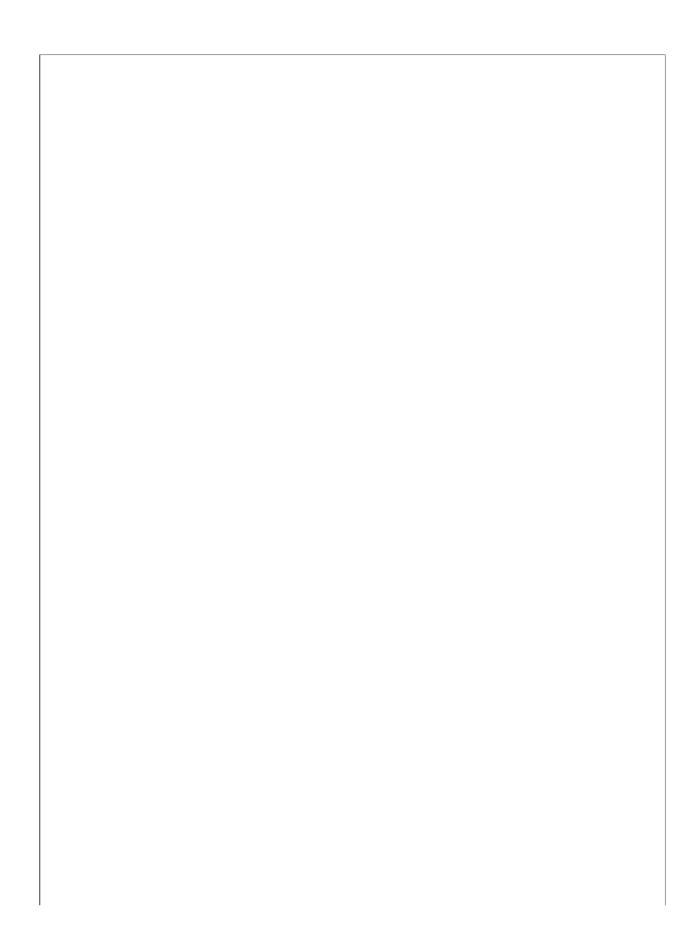

will no longer be a distance function when  $r = \frac{1}{2}$ . (2 marks)

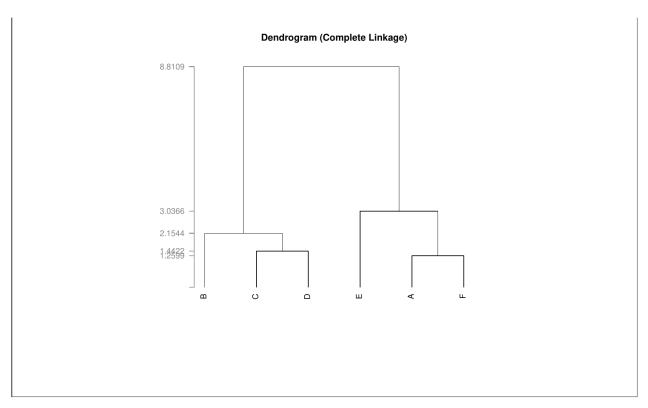

2. (May 2020 Final Q3(c)) Group the observations in Table 3.1 using hierarchical clustering and the **Minkowski distance** with r=3 (refer to part (b) for the definition of Minkowski distance) and **complete linkage** and draw the dendrogram formed by the hierarchical clustering.

Table 3.1: Unlabelled data.

| Obs      | $x_1$ | $x_2$ | $x_3$ |
|----------|-------|-------|-------|
| A        | 1     | 3     | 2     |
| В        | 5     | 7     | 9     |
| С        | 6     | 9     | 8     |
| D        | 7     | 8     | 9     |
| ${ m E}$ | 2     | 3     | 5     |
| F        | 1     | 4     | 3     |

(4 marks)

3. (Jan 2021 Final Q4(a). Hand calculation is possible but Excel/R is recommended) Group the observations in Table 4.1 using hierarchical clustering and the **Manhattan distance** and **single linkage** and draw the dendrogram formed by the hierarchical clustering.

Table 4.1: Unlabelled data.

| Obs          | $x_1$ | $x_2$ |
|--------------|-------|-------|
| A            | -2.68 | -2.02 |
| В            | 3.06  | -0.83 |
| $\mathbf{C}$ | 1.91  | 1.57  |
| D            | -1.06 | -0.88 |
| $\mathbf{E}$ | 0.49  | 2.42  |
| $\mathbf{F}$ | 0.83  | 1.75  |
| G            | -0.71 | -0.84 |
| Н            | -2.01 | -1.92 |

(5 marks)
